1. The First Class Hike is the culmination of a Scout's progress in the Troop. Those skills and techniques that he has learned in the gradual process of advancement through the grade requirements should be brought into play when he takes the Hike.

2. The regular Patrol and Troop hikes in which he has taken part; the week-end and long-term camps he has attended all will have contributed to his knowledge of campcraft. Cooking with and without utensils; use of aluminum foil, types of fires and wood, plus the many tips and hints that his Patrol Leader, and you as a Troop Scouter have given him and prepared him for in this phase of his big adventure - The Hike.

3. Many Scouts make a report and do sketching for the first time on their Hike. This is not fair to the boy. He must be given the opportunity and the encouragement to sketch, make reports and logs of his hikes, overnights, camps and special Troop events.

4. On Patrol and Troop hikes and camps, woodcraft should be taught and developed. Sanitation, gadgets, shelters, knots and lashings, axe and knife - all those skills that will allow the Scout to make himself comfortable safely in a backwoods setting.
5. The Hike must be discussed between the boy and his Scouter. The boy must know what is expected of him – his Hike Report, his projects, the theme of the hike. The Scoutmaster should ensure himself that the boy is really ready to take his Hike.

6. Before the Scouts go on their First Class Hike, the Troop Scouters should go over the route themselves. This will ensure that there will be no confusion of directions or instructions. These days, the face of the land can change rapidly. What may have been open country a few months ago may be a housing development or a super highway today. So check the route personally and layout the course as you go, noting interesting features for project and study.

7. At approximately the half-way point in the Hike locate a good camping area and whenever possible contact the owner of the property to secure permission for the Scouts to camp overnight. It is a good idea to explain to the owner the purpose of the Hike so that he will have an understanding of why the boys should camp out and not be offered the facilities of any nearby habitation. Except, of course, in an emergency.

8. After you have checked the route and received permission to camp you can now prepare the Hike instructions. Many Scouters build the First Class Hike around a central theme and tie in projects and instructions with this theme. Conservation, history, waterways, farming, wild-life, nature study, surveys of various kinds are but a few themes that may be used. Instructions must be clear in terminology and typewritten for legibility. They should not be so detailed, as to leave nothing to the imagination and initiative of the boys. Use compass bearings, map reference and up-to-date topographical maps. Select projects that will fit into the hike theme. Make the projects worthy of undertaking and the Hike time-schedule should be so organized that they may be completed satisfactorily.

9. The Scouts should check over their equipment carefully and pack it properly in a good rucsac. This phase of the Hike reflects on the type of training they have had. The Scouts will make up their own menus, determine the quantities needed and estimate the weight of the food. Before buying the supplies the Troop Scouter should check the menus for variety and content.

10. The day prior to leaving for the Hike, sealed instructions are received from the Scouter. On the envelope are directions as to where the instructions are to be opened. The Hike is now underway.
11. At the designated spot the instructions are opened and a few moments should be spent plotting their route, checking any map references and planning the best means of arriving at their destinations. Once this has been done the Scouts are on their way to what should be a rewarding and interesting adventure. The Report is started at this point and kept in detail until the end of the Hike.

12. The use of compass, following a course, map reading (symbols, references, scales, etc.) highway safety, all come into play now as the Scouts progress along the route.

13. Hike Reports are kept up-to-the-minute with notes and sketches being made en route.

14. Arriving at their camping spot the Scouts set-up camp, and make the necessary arrangements for a comfortable night. The evening meal is cooked and eaten, the surrounding countryside explored, Hike Reports brought up-to-date and then to bed.

15. The following morning, after breakfast, the camp is struck, the grounds cleaned and if possible, the owner of the property thanked.

16. The final leg of the Hike is now underway and as they go the Scouts follow the instructions. Perhaps a historical site of interest is visited, a survey of a town's main business made, etc.

17. Projects outlined in the instructions are completed: looking for suitable Patrol camping spots, sounding a river, studying erosion or a specific wildlife habitat - marsh, lake, woods or field. These projects are many and varied and need only a little imagination to appeal to the boys' sense of adventure.
18. It is a good idea to arrange a rendezvous with the boys for a definite time at a certain map reference. This is not only god training but winds up the Hike neatly. The Hike Reports should be turned in at this time to the Scouter. This should be made clear to the boys before they leave so that their Report will be kept neatly and up-to-date en route.

19. An important phase of the First Class Hike is a review of the Hike as a whole and a review of the Hike Report. This is good training and both the Scouter and the boys can gain a great deal from this experience.

20. If all these points have been covered in logical sequence the First Class Hike cannot help but be a success. The Scouts will have learned a lot and put into practice those skills they have learned during their Troop life, and have had fun and adventure. From the review with them and reading their Reports you will know that your Scouts are First Class in every aspect.

As we have suggested, the First Class Hike Report should not be the only report a Scout has undertaken prior to his Hike. Much practice is needed before the boy reaches this stage. Begin on day hikes by eliciting observations en route, point out things worth noting. Teach Scouts what to look for and their relative value. Various specific purposes should be selected for themes of hikes and reports, for example:

**The Countryside**
- Land Forms
- Geology
- Conservation
- Nature Lore, etc.

**Highways**
- Trails and Roads
- Turnpikes, Bridges
- Modern Transport
- Waterways, Canals

**Man and his Work**
- Agriculture
- Village and Town
- Surveying
- Industry, Architecture
- Folk Lore & Crafts

**Things of the Past**
- Prehistoric
- Indian Burial
- Grounds
- Historic Sites
- Churches, etc.

In the early stages of training only part of one of the above should be selected; later others may be added. A lot depends on the age and education of the Scouts. Always have a brief written account of what has been done and seen in note form en route. Make this part of Patrol Competition and assemble the reports for Patrol or Troop logs.

The First Class Hike Report should be the culmination of much previous training. Remember that in the course of a 14 mile hike, with camping, plus reporting, sketching and projects detailed observation is impossible. The Report should show the spirit of adventure which is much more important than formality. Education and maturity of your Scouts should be taken consideration in reviewing the results.

There is no official form of report but the following suggestions do make for clearness and simplicity:
- Use a good grade paper, bound in a hard-back loose leaf cover. Set up your first page showing: To whom the report is being made. From the person making the report. Subject of the Report. Dates commenced and completed. Location of start, camping spot and finish.
- Weather-General description at start and progress throughout. Temperature, barometer reading, cloud cover, visibility, humidity may be added.
- Map Used-Giving sheet number and scale.

Rule off in advance, the left hand pages to show date, times of observations and other activities. Leave the largest space for notes and then a column for miles covered. The right hand page can be used for sketches and maps.
- Train the Scouts to be concise and exact in their Reports using telegraphic language.
- All names should be printed in capitals for accuracy.
- Leave extra space on the paper for additions.
- Re-read upon completion to check for any omissions.
- Select only facts.

What kind of things may be expected in the report column? This is the general report apart from an, special bias that the writer may have.

1. A clear account of the route travelled with references to the map used may be expected. Where there is likely to be any confusion in following the route, awkward cross-roads, or paths not too clearly marked, care should be taken to get the directions clear; a sketch of a land mark or a small map will help.

2. Some idea of the type of country travelled through should be given; the natural features should be mentioned, kinds of crops, nature of woods, open spaces, streams, lakes, canals, bridges, roads.

3. An interest in the human and natural life of the district should be shown whether it is largely industrial or agricultural; what kinds of houses there are to give an idea of the well-being of the people; whether there are any local crafts carried on; animal and bird life.

4. The writer should show his interest in man's structures, his churches, ruins, country houses, mills, and any other historical features of interest.

An intelligent Scout should, after his training up to the time when he is fit to take his First Class Hike, be able to note such matters as are mentioned above.

This all implies previous training; this has been constantly mentioned, but it is worth underlining the need for preparing the Scout by short hikes with the Scouter, by short journeys on his own or with a pal, and by practice in reporting. We have been too apt to expect a Scout to write intuitively a good journey report, and when he has naturally failed, except in a few cases, we have blamed the requirement!

Here, as in all Scout requirements, effort made should count before all else, bearing in mind that this requirement is the final one for First Class grade. However as B.P. once wrote a Scout is not a Scout until he is a First Class Scout. Thus real and adventurous Scouting starts at this point where the Scout has received sufficient training to undertake adventures further afield, to get to know all he can about his surrounding district from his own observations, from talks with people he meets, and from maps, museums, books, papers and all the innumerable sources of information that are open to him.
